2.	Installation Apache2 version 2.4.6	4
3.	Installation php 8.2.28	4
4.	Installation MariaDB Server V.15.1	5
5.	Création de la base donnée	5
6.	WordPress est installé sans certificat	6
7.	Déploiement du certificat avec le client Certbot	7
8.	Certificat Let's Encrypt	Erreur ! Signet non défini.
9.	Et voilà le Backoffice du CMS	8
10.	Vous trouverez ci-dessous le lien pointant vers mon WordPress	8

Cette procédure à pour objectif de montrer comment je suis arrivé pas à pas à installer une instance sur AWS, installer un serveur WEB, installer MariaDB et création d'une base de données donc mon serveur LAMP pour héberger Word Press.

1. Création de l'instance sur AWS

L'instance que j'ai créée a pour but d'héberger mon serveur LAMP, on y retrouve différentes informations dont nous aurons besoin par la suite.

The screenshot shows the AWS Management Console for the eu-north-1 region. The 'Instances' page displays a table with one instance, 'Mon WP', which is in the 'En cours d'initialisation' state. A callout box with the text 'Instance créé' points to this instance. Below the table, the details for instance 'i-022635ec06777f60d' are shown, including its public IP address (16.170.225.132), private IP address (172.31.37.216), and other configuration details.

Name	ID d'instance	État de l'instance	Type d'instance	Contrôle des stats	Statut d'alarme	Zone de dispon.	DNS IPv4 public	Adresse IPv4...	IP élastique	Adresses IP...	Surveillance	Nom du groupe de s...	Nom de clé
Mon WP	i-022635ec06777f60d	En cours d'...	t3.micro	Initialisation en c...	Afficher les alar...	eu-north-1b	ec2-16-170-225-132.eu...	16.170.225.132	-	-	disabled	launch-wizard-1	wordpresspau...

Détails de l'instance i-022635ec06777f60d (Mon WP)

- Résumé de l'instance**
 - ID d'instance: i-022635ec06777f60d
 - Adresse IPv6: -
 - Type de nom d'hôte: Nom de l'adresse IP: ip-172-31-37-216.eu-north-1.compute.internal
 - Réponse à un nom DNS de ressource privée: IPv4 (A)
 - Adresse IP attribuée automatiquement: 16.170.225.132 (IP publique)
 - Rôle IAM: -
- Adresse IPv4 publique**: 16.170.225.132 | [adresse ouverte](#)
- État de l'instance**: En cours d'initialisation
- Nom DNS de l'IP privé (IPv4 uniquement)**: ip-172-31-37-216.eu-north-1.compute.internal
- Type d'instance**: t3.micro
- ID de VPC**: vpc-0c89079f6b641b391
- ID de sous-réseau**: subnet-0fdaa0746c433ba43
- Adresses IPv4 privées**: 172.31.37.216
- DNS IPv4 public**: ec2-16-170-225-132.eu-north-1.compute.amazonaws.com | [adresse ouverte](#)
- Adresses IP élastiques**: -
- Recherche d'AWS Compute Optimizer**: [Inscrivez-vous à AWS Compute Optimizer pour obtenir des recommandations.](#) | [En savoir plus](#)
- Nom du groupe Auto Scaling**: -

2. Installation d'Apache2

Apache2 est un serveur WEB qui va nous permettre d'héberger notre site WEB.

Nous pouvons voir que j'ai utilisé une version 2.4.62 d'Apache.

admin@ip-172-31-37-216:~$
```

Ici j'ai installé php8.2.2z

4. Installation MariaDB Server

Maintenant l'installation de la base de donnée, j'ai choisi MariaDB en version 15.1.

```
... skipping.

By default, a MariaDB installation has an anonymous user, allowing anyone
to log into MariaDB without having to have a user account created for
them. This is intended only for testing, and to make the installation
go a bit smoother. You should remove them before moving into a
production environment.

Remove anonymous users? [Y/n] Y
... Success!

Normally, root should only be allowed to connect from 'localhost'. This
ensures that someone cannot guess at the root password from the network.

Disallow root login remotely? [Y/n]
... Success!

By default, MariaDB comes with a database named 'test' that anyone can
access. This is also intended only for testing, and should be removed
before moving into a production environment.

Remove test database and access to it? [Y/n]
- Dropping test database...
... Success!
- Removing privileges on test database...
... Success!

Reloading the privilege tables will ensure that all changes made so far
will take effect immediately.

Reload privilege tables now? [Y/n]
... Success!

Cleaning up...

All done! If you've completed all of the above steps, your MariaDB
installation should now be secure.

Thanks for using MariaDB!
admin@ip-172-31-37-216:~$ mariadb -V
mariadb Ver 15.1 Distrib 10.11.11-MariaDB, for debian-linux-gnu (x86_64) using EditLine wrapper
admin@ip-172-31-37-216:~$
```

5. Création de la base donnée

Une fois MariaDB, je créer la base de donnée pour word press ainsi qu'un utilisateur administrateur pour cette base de donnée ensuite nous lui donnons tous les droits sur cette base de donnée.

```
admin@ip-172-31-47-133:/tmp$ mysql -u root -p
Enter password:
Welcome to the MariaDB monitor.  Commands end with ; or \g.
Your MariaDB connection id is 39
Server version: 10.11.11-MariaDB-0+deb12u1 Debian 12

Copyright (c) 2000, 2018, Oracle, MariaDB Corporation Ab and others.

Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.

MariaDB [(none)]> create database wordpress_ais;
Query OK, 1 row affected (0.000 sec)

MariaDB [(none)]> CREATE USER amin_paul@localhost IDENTIFIED BY ' ';
Query OK, 0 rows affected (0.002 sec)

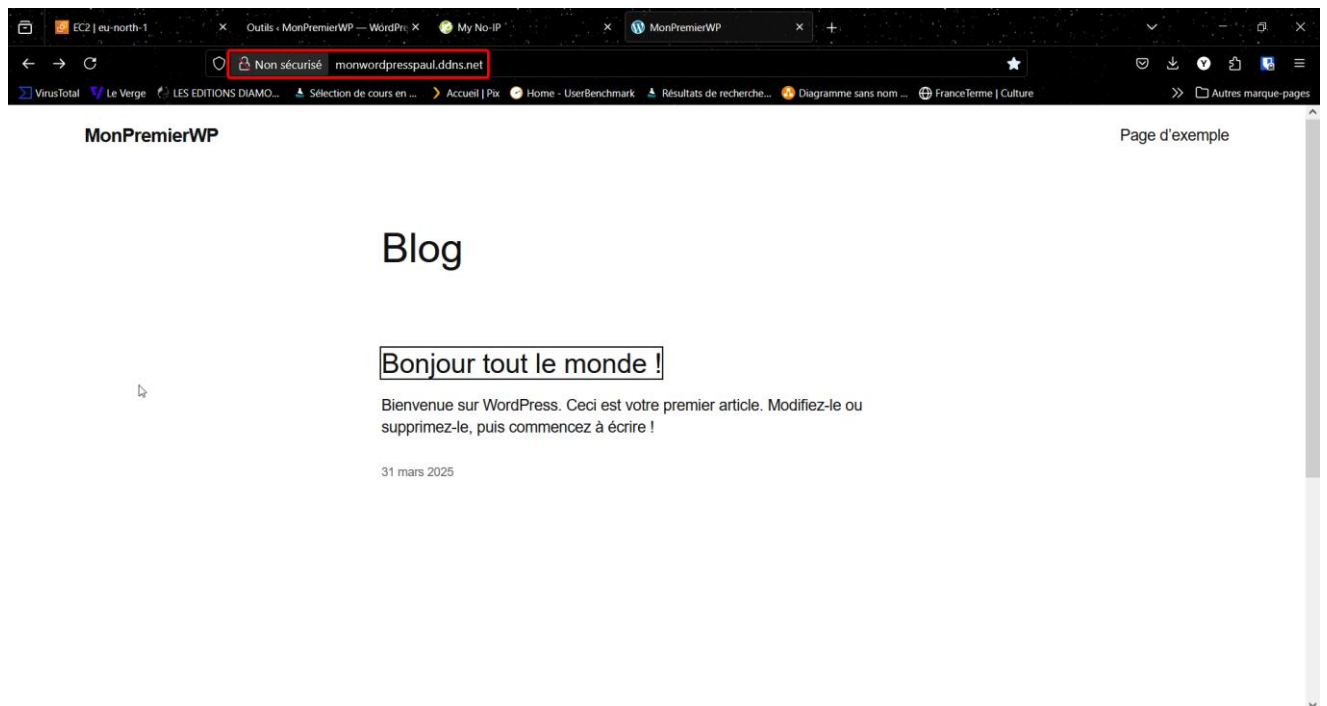

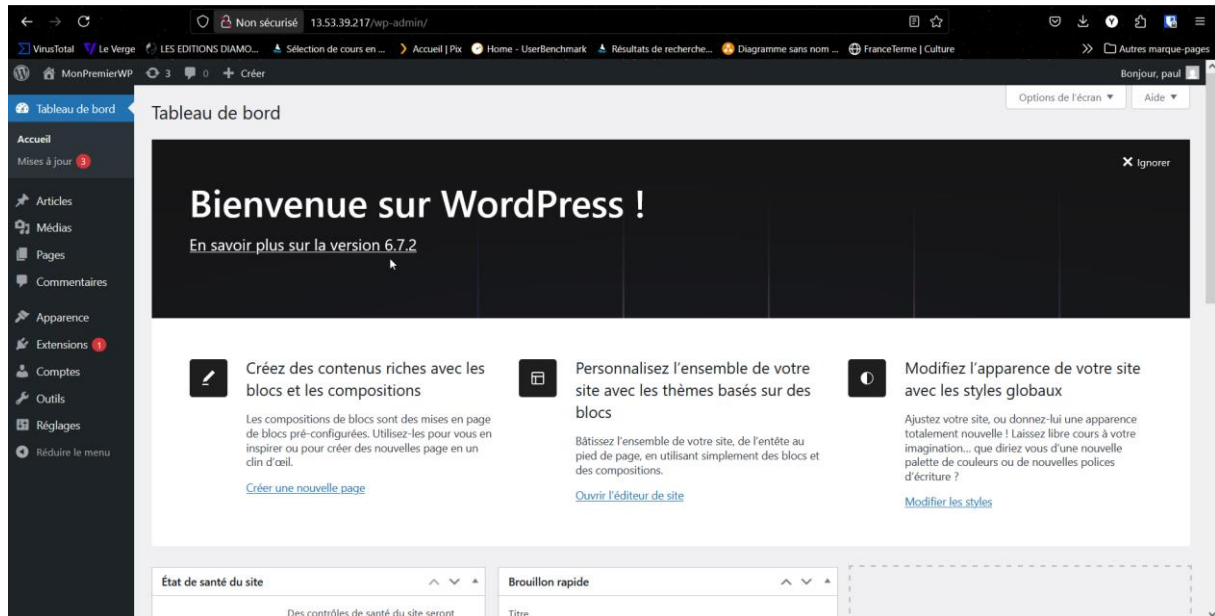

MariaDB [(none)]> GRANT ALL PRIVILEGES ON wordpress.* TO amin_paul@localhost IDENTIFIED BY ' ';
Query OK, 0 rows affected (0.001 sec)

MariaDB [(none)]> FLUSH PRIVILEGES;
Query OK, 0 rows affected (0.000 sec)

MariaDB [(none)]>
MariaDB [(none)]> EXIT;
Bye
admin@ip-172-31-47-133:/tmp$
```

6. WordPress est installé sans certificat

Installation de WordPress (j'ai oublié de prendre les commandes en screen...) pour installer WordPress il est nécessaire de le télécharger l'archive ensuite de le décompresser dans /var/www/html

Pour le DNS j'ai choisi d'utiliser « No Ip » qui m'a permis de pointer l'adresse IP du serveur avec un nom de domaine.

7. Déploiement du certificat avec le client Certbot + Certificat Let's Encrypt

Pour le déploiement du certificat, j'ai décidé d'utiliser le client Certbot, je ne connaissais pas certbot alors j'ai effectué quelques recherches concernant celui-ci. J'ai appris qu'il permettait d'automatiser la configuration de certificats pour des sites internet et qui utilise « Let's Encrypt ».

```
Processing triggers for man-db (2.11.2-2) ...
Processing triggers for libc-bin (2.36-9+deb12u10) ...
admin@ip-172-31-47-133:~$ sudo certbot --apache -d monwordpresspaul.ddns.net
Saving debug log to /var/log/letsencrypt/letsencrypt.log

8. Et voilà le Backoffice du CMS

Une fois le certificat configuré nous revoilà sur le backoffice et la page WEB avec le certificat.

9. Vous trouverez ci-dessous le lien pointant vers mon WordPress
<https://monwordpresspaul.ddns.net>

10. Défis de cybersécurité avec RootMe

Voici la capture d'écran avec mon score total sur RootMe

The screenshot shows a web browser displaying the RootMe website. The address bar shows the URL: `https://www.root-me.org/Paul-894161?inc=score&lang=fr`. The page title is "profil de Paul | Root Me - platel...". The browser's address bar also shows several tabs: "VirusTotal", "Le Verge", "LES EDITIONS DIAMO...", "Sélection de cours en ...", "Accueil | Pix", "Home - UserBenchmark", "Résultats de recherche...", "Diagramme sans nom ...", and "FranceTerme | Culture".

The RootMe logo is visible in the top left. Below it, a navigation menu includes: "Capture The Flag", "Challenges", "Communauté", and "Informations". A sidebar on the left shows "1777 visiteurs en ce moment" and a list of "derniers inscrits" (newly registered users): "cevalor", "slecom", "paulou", "mar338", "BigDrooggg79", "Wafae El Mrabet", and "qibk". Below this, there is a section for "Offres" (Offers) with a link to "CDI Consultant sécurité". At the bottom of the sidebar, it says "Sponsorisé par" (Sponsored by) and lists several organizations: "Algosecure", "École 2600", "Elysium Security", "GEOIDE", and "Oteria Cyber School".

The main content area is titled "HOME / PROFIL DE PAUL". It has a sub-menu with "Profil", "Score", "CTF all the day", "Statistiques", and "Contact". The "Score" tab is selected. The profile section shows a user named "Paul" with a French flag icon. To the right of the name, there are four statistics: "Place" (49339), "Points" (315), "Challenges" (25), and "Compromissions" (0). Below this, there is a grid of challenge categories, each with a progress indicator (a circle with a percentage):

- App - Script**: 0 Points, 0 / 33, 0%
- App - Système**: 0 Points, 0 / 93, 0%
- Cracking**: 0 Points, 0 / 70, 0%
- Cryptanalyse**: 10 Points, 2 / 75, 33%
- Forensic**: 0 Points, 0 / 44, 0%
- Programmation**: 0 Points, 0 / 29, 0%
- Réaliste**: 0 Points, 0 / 10, 0%
- Réseau**: 0 Points, 0 / 10, 0%
